PILOT

**a word from
Pilot Group
president.**

Hello everyone.

I am Fumio Fujisaki. I have taken over as the President, succeeding Mr. Shu Itoh.

Since I became the Head of International Sales Department in 2015, and then appointed CEO of PCE in 2019, even we had digital PEM during COVID-19 pandemic, I have attended PEM several times so far.

The worldwide environment is currently facing a slowdown in the global economy caused by high prices, subsequent monetary tightening and so on associated with geopolitical risks like conflicts in various regions. As a result, the outlook remains uncertain.

In this situation, last year PILOT group achieved record-high net sales for consolidation, driven by strong sales of the writing instrument business in such products as FRIXION series in Japan and G-2 gel roller ball pen in the U.S.A. The yen's depreciation also had a positive impact on net sales. On the other hand, profits fell due to economic slowdown caused by remained high prices and increase in total costs such as labor costs.

PILOT group has established the Purpose of "Our Creations Inspire Creativity" and has been trying to share with our employees and other stakeholders around the world. I believe everyone has been working towards realizing the Purpose every day so far, but now again I would like you to recall what the Purpose is.

The Purpose of PILOT is the significance that PILOT as a company exists in this world.

PILOT has been supporting all the people who think, communicate, learn, and create something by supporting the act of writing. That has been our joy and pride. We keep and value supporting the act of writing of people so their creativity can be freely unleashed. For that, we will continue to exist.

And then, I would like you all to remember that all the works of every single person are connected to the accomplishment of our Purpose. It is especially important that yourself, not someone else, take initiative and act.

Furthermore, we formulated the 2022-2024 Medium-Term Management Plan to realize our 2030 Vision. Having positioned 2022-2024 as the three years for "Reform and Challenge," as this year is the final year of the current medium-term business plan, we will speedily implement five basic strategies.

I would like to share the five basic strategies with you.

Basic strategy 1 is to make internal functions strengthen further for business expansion.

Toward 2030, we will drive forward to strengthening marketing and R&D functions, building supply chains, and strengthening sales channels and distribution in stages.

Basic strategy 2:

We actively consider and implement capital and business alliances with other companies for business expansion. Then, we try to increase market shares of the existing products, expand new item range, and create a new business concept from a medium-to long-term perspective.

Basic strategy 3 is to strengthen overall group governance system.

Basic strategy 4:

By integrating Sustainability and Medium-Term Management Plan, we accomplish our vision to contribute to economic value as well as the environment, society, and employees.

Basic strategy 5:

We formulate a long-term design of human resources and advance human resource development and strengthening of organization, as well as enhancement of diversity and specialty by utilizing external human resources. At the same time, develop unified organizational culture involving all the employees.

Based on the 2022-2024 midterm business plan, this year we will formulate and implement next a three-year medium-term business plan starting from 2025. We will need cooperation from all of you in formulating the plan. I appreciate your support.

We imagine that the business environment surrounding Europe is uncertain and achieving sales target would be very challenging. Therefore, it would be beneficial to communicate needs and concerns in your market during this PEM and collaborate with PCE to find solutions together.

Lastly, once again I really appreciate your everyday efforts and dedication to the PILOT product sales.

Thank you very much.

Fumio Fujisaki
President & Representative Director

« to provide everyone in Europe with the greatest writing experience and be the customer's 1st choice »

With PILOT, it's not only about writing.

It's about thinking for yourself, daring to express your thoughts and personality, declaring your convictions to the world. Connecting ideas together, developing a sense of endeavour, trying till succeeding. Saying to someone I love you...

Handwriting has always been a powerful driver, enabling anyone to express themselves the way they want. Especially in the digital age, handwriting offers a more personal link to the world, a physical connection to words and ideas, and thus an opportunity to empower people to express their uniqueness.

As a pioneer and leader driven by a passion for quality, innovation and sustainability, PILOT has provided, for more than 100 years, top quality pens to make the most of your handwriting and achieve what matters.

Whoever you are, a schoolchild, an artist, a worker, a mother, a friend... we care about the colour of your ideas, passions and about who you are.

Because we know it's by writing, drawing, underlining, doodling, ...that you are writing your world. We are proud of what you do with our pens....

WRITE YOUR WORLD.

PILOT.

writing, it's much more than ink marks on a piece of paper...

our ambitions & objectives for 2025.

For the first year of this new mid-term plan, PCE will aim to be the link between our European partners and our Japanese headquarter, to continue to develop the PILOT brand and products and to meet the raising demands of our society and stakeholders.

with **PILOT**,
anyone has the
power to write
their world.

schoolchildren and students

hobbyists and artists

by daring to express
themselves
through our

creative range

By 2025

1/ We aim to be the N°1 brand in Europe by:

- **By developing a consistent brand awareness all around Europe with strong end- users oriented tools** (the Pilot brand book, the brand film, brand social media guidelines, a new corporate website: www.pilotpen.eu)
- **By strengthening & increasing sales of our bestseller FRIXION including new launches:**
 - A new range of Licensing FriXion pens. After Naruto, let's continue to seduce young end-users and teenagers thanks to a partnership based on the famous "ONE PIECE" License, the famous Japanese manga that is very trendy in Europe.
 - FriXion Ball +: The first sustainable & erasable roller of the market targeting adults at work. FriXion Ball + is produced in Europe with minimum 84% of recycled plastic and is refillable with the FriXion refills.
- **By increasing sales in other key categories of the market with new ranges and promotional support:**
 - A new decorated version of G2: G2 bubble, made in our factory of Allonzier-La-Caille (Haute- Savoie), will trigger impulse purchases thanks to a fun design wrapping.
 - A full assortment of offers, communication, promotions and in- store tools for our best sellers: markers (V-Board Master & SCA 100/400) & ballpoint pens (Supergrip & Supergrip G).

2/ We aim to be the best sustainable brand and eco-responsible partner in the writing instrument segment:

- **By enhancing our Corporate Social Responsibility strategy:** to make the difference in our business, PCE has developed a Corporate Social Responsibility strategy. This global corporate strategy includes 4 main topics: Environment, Social, Societal and Governance. The strategy summarises all that has been done over the past years and announces our commitments and objectives.
- **By enlarging our sustainable writing solutions in each target group:**
 - The new refillable FriXion Ball + launch, made in Allonzier with at least 84% of recycled material is also a key project to achieve our ambition of extending our eco-friendly range extension.
 - PCE is also conducting a study to make all our best- sellers even more eco-designed.

3/ We aim to be the best choice of our customers & consumers in Total Customer Experience:

- **By achieving end- users satisfaction thanks to our high-quality products.**
- **By increasing operational efficiency and providing better services to our customers & consumers (accessibility to products, CRM, etc).**
- **By streamlining our supply chain management to enable higher service levels with better clarity and control.**

contribution.

Committed to writing a better world

For more than 100 years, PILOT has supported the act of writing as a mean of empowering people to express their uniqueness – this is our mission.

CSR is an integral part of Pilot's development strategy and has always been a core focus of the group. Pilot Corporation of Europe has now decided to adopt a sustainability report as an element of planning and control, with the objective of continuous improvement

*Committed to writing
a better world together...*

...is a significant step forward, uniting sustainability with client and partner satisfaction.

Mr Yoshio Wada
CEO, Pilot Corporation of Europe.

For more information : <https://www.pilotpen.eu/csr-commitments/>

OUR CSR COMMITMENTS AT A GLANCE

Today, our CSR approach is based on four pillars, which are...

**write
better
with
less**

Initial life cycle analyses were undertaken in the early 2000's on our main products. Identifying the most impactful steps has allowed us to set out our 4 Rs product sustainability strategy (Recycled material, Reduce, Refill) which has guided our development since.

- /01 Pursue **high quality and reliability** standards.
- /02 Develop **eco-designed ranges through our 4R policy:** Recycled materials, Reduce, Refill, Reclaim.
- /03 Demonstrate **transparency** in our environmental actions and support **climate projects**.

**write
better
with
care**

We make every efforts to monitor and reduce the environmental impact associated with our activities and facilities. We implement action plans on carbon footprint, energy consumption, and waste production. Logistics is also at the core of our concerns, with an ambitious carbon reduction program.

- /01 **Monitor risks** among our value chain and direct our purchase towards **responsible sourcing**.
- /02 Assess and **minimize the impact of production** on the environment.
- /03 Optimize **our supply chain** and minimize its impact.

**write
better
together**

PCE's ambition is to allow each and every person to express their full potential within the company. This is why PILOT is constantly pushing back the boundaries of innovation so that everyone can express their personality and develop their skills within a team.

- /01 **Grow through respect:** provide the right working conditions for the personal and professional fulfilment of all our employees.
- /02 **Grow through improvement:** Nurture talents and provide opportunities to develop their skills and professional career.
- /03 **Grow through actions:** Encourage employees to contribute through practical initiatives for the support of our environmental and societal commitments.

**write
for
well-
being**

We believe in the power of handwriting to empower people to express their uniqueness and to sustain their cerebral faculties. This is why we are committed to supporting the development of cognitive and expressive capacities through handwriting, at all ages.

- /01 Raise awareness of the **benefits of handwriting**.
- /02 Help the development of **cognitive and expressive aptitudes**.
- /03 Participate in the life and well-being of our **local communities**.

write **better with less.**

Develop innovative
eco-designed ranges
based on our 4R Policy.

recycle,

Give maximum priority
to using recycled plastic.

pilot online.

The digitalization of our business is one of the key challenges in our mid-term plan. To address this, PCE offers tools like Extranet, Shared Media Server to enhance communication and collaboration within our organization. Additionally, we are effectively promoting our brand and showcase our main products through corporate websites and product landing pages.

Furthermore, we are actively working on developing a strong e-commerce presence with the help of Product Information Management (PIM) and a Business-to-Business (B2B) platform. These initiatives are crucial in adapting to the evolving market and staying competitive in the digital era.

corporate website

The new Pilot corporate website is the ideal platform to promote Pilot brand. Launched in 2024 for PCE and then deployed in more than 15 European countries, this website offers an attractive brand presentation and a main product ranges presentation, featuring demo videos of our best sellers and new writing instruments. The website is regularly updated with new content and banners. Aimed at our European partners who don't have our e-commerce website solution, the Corporate website enables us to present the Pilot brand in a qualitative and coherent way to consumers across Europe, while giving our partners the freedom to adapt the website's content to their local needs.

You do not have the Corporate website yet? Please feel free to contact PCE Digital Team.

www.pilotpen.eu

PIM.

The PIM database is essential, offering technical, logistics information, and marketing content for our European product range. Staff and distributors require reliable and up-to-date product data. With Akeneo, product information has never been more trustworthy and accessible to all key users. The PIM is connected to several B2B and D2C websites and allows quick data exports to share accurate product data with our business partners. You can contact the PIM coordinator to configure customizable exports that match your customers' data models and use the new GEN AI functionality to help you generate product descriptions and perform automatic translations in bulk. You can also contact the PIM coordinator for online training sessions.

<https://pim-pce.cloud.akeneo.com>

shared media server.

Our Shared Media Server serves as a platform for sharing, offering over 3000 mood pictures and videos for social media animation. Easily search and download content designated for various settings (school, work, home) to enhance your social media presence.

<https://media-pce.netexplorer.pro/>

extranet.

The extranet is the primary 24/7 tool for accessing all PCE marketing and graphic content. It offers high-resolution product images, displays, logos, as well as Marketing Tools (posters, catalogues, digital assets) and Graphic guidelines. The interface ensures easy and immediate access to the latest PCE content. Use the search bar for intuitive searches using EAN codes or keywords. Download all available information and graphic resources, including printing files, with just a few clicks, specifically tailored for the European market.

<https://extranet.pilotpen.eu/>

B2B platform.

This European core model e-commerce website is an excellent asset for enhancing local sales. Exclusively for resellers, it offers a digital channel to receive orders, considering specific business agreements such as payment terms, discounts, prices, addresses. Operating on cutting-edge technology, the B2B platform is accessible 24/7, automating order processing and providing a genuine competitive edge. For details on obtaining the B2B platform, please contact the Digital team.

Pintor website.

The Pilot Pintor marker mini-website emphasizes product features, selling points, benefits, and usage with videos, pictures, and store locations using a local Store location app in each Pilot country. Our creative leisure, DIY, and amateur artists' website continuously receives new Pintor content (DIY and Pilotart) through collaborations with inspiring artists. Unleash your creativity with Pilot's Pintor paint marker pens!

Don't have the Pilot Pintor website in your market yet? Please feel free to contact PCE Digital Team.

www.pilot-pintor.eu

FriXion website.

This dedicated Pilot FriXion pens mini-website presents a significant opportunity for increasing Pilot's online presence and promoting the FriXion range. It showcases our product range tailored to various target audiences: elementary school (ages 6 to 10), secondary school (ages 11 to 17), home use for kids, teens, and adults, as well as work settings for business school students and active workers. The Pilot FriXion mini-website features over 40 videos (writing samples, demonstrations), tips, photos, and is fully optimized for search engines.

A

ATT System (Air Tight Through): Integrated into the cap, this system makes it possible to keep the pen in a completely sealed, airtight environment, thus guaranteeing the pen is ready to use immediately and in complete safety. It is sort of a cap within a cap.

C

Cleaning unit: Metallic piece making it possible to clean the Parallel Pen before changing the ink colour. It is filled with water then through pressure it is used like a refill and removes ink residue.

Correction tape: An easy to use tape which does not blot, our correction tape provides high quality coverage, making it possible to correct perfectly with total invisibility on a photocopy or fax.

D

Dimples on the tip: This technique makes it possible to assemble the ball and tip of the pen. This stage is very important because the reliability and smooth rotation of the ball depends on it. On the majority of pens, the tip has four dimples. On our fine Hi-tecpoints, the ball is set in only three dimples (exclusive to PILOT) allowing greater freedom for the ball to rotate.

E

Eraser (Integrated Eraser): The majority of our mechanical pencils have an eraser. This can easily be replaced in the event of wear and tear.

F

Full Sliding Sleeve: The sleeve is the metallic tube allowing the lead to slide inside the end of the mechanical pencil. On our mechanical pencils this sleeve slides inside the cone to protect it and prevent it from bending, which makes the product unusable. It also makes transporting the pencil easier by preventing it from damaging or piercing pockets or objects.

G

Grip (Ergonomic Grip): located on the pen's barrel at the point where the pen is held allows it to be held more comfortably and avoid the strain that can occur after writing for long periods. There are various forms and different thicknesses.

I

Ink (Acroball Ink): The ultimate development in low viscosity ink. This oil based ink is at the leading edge of ball point pens (for its ease of use) and liquid ink rollerballs (for the way it glides across the paper). It gives a denser colour, an almost instant drying time and is water resistant. Only available for the Acroball Plastic & Metal pen & COUPE and Dr Grip Pure White & Full Black.

Ink (Bio-Polymer Gel Ink): The fluidity of this gel ink has been improved thanks to the use of a bio-polymer. Mainly used in needle-point products, this technological advance is vital for providing a perfect flow of ink to the paper.

Ink (Direct Ink System): A system without cartridges. The ink is injected directly into the barrel of the pen to save on materials and give greater autonomy.

Ink (Dry wipe Ink): Specially developed to write on white boards, this ink contains an alcohol base. It gives a strong colour as well as being easy to erase. To retain all the qualities of our dry wipe markers, it is recommended that the caps are replaced firmly and they are stored horizontally.

Ink (Dye Ink): The use of permanent ink colouring molecules in the majority of our gel and liquid ink rollerballs is one of PILOT's major specialities. This technology provides a reliable ink flow because there are no particles to hinder the ball's rotation. Furthermore, unlike with pigment inks there is an infinite range of possible colours.

Ink (Erasable Ink): This generally blue ink is made up of an organic dye. It can be erased because it is destroyed when it comes into contact with the sodium bisulphite, which is contained in the ink erasers. Therefore, it is not a physical removal of the ink, but a chemical reaction which transforms the coloured ink into a colourless ink. Our V-Pen range of fountain pens has 8 colours of erasable ink.

Ink (Gel Ink): Gel ink is an ink resulting from a blend of oil and water. It is halfway between a low viscosity ink and a liquid ink. Gel ink cartridges are blocked with a paraffin plug to ensure air tightness. The ultra quick rotation of the ball liquefies the ink by warming it. It is an extremely smooth ink with an amazing colour.

Ink (Liquid Ink): Liquid ink is a water based ink. This exceptional smoothness provides unrivalled benefits in the world of writing: it flows instantaneously, a perfectly controlled ink flow, great fluidity, and record autonomy. It provides maximum comfort. When flow is controlled by the PILOT ink regulator (see Ink Regulator), it flows until the very last drop with the same line quality. Today, this ink is available in refillable cartridges for some rollerball models.

Ink (Metamo Ink - FriXion): Exclusive to Pilot, this thermo sensitive gel ink can be completely erased through friction. A plastic, hardwearing tip is placed at the end of the pen to rub the paper with. You can then immediately re-write with the same pen. This action can be repeated an infinite number of times. The ink's operating range is between -10°C and +60°C. Several minutes in a very cold place (such as a freezer) can make the erased line reappear.

Ink (Multi Surface Ink): This water based permanent ink can be used to write easily on the majority of surfaces such as plastic, metal, glass, wood or ceramics as well as on paper or card. This permanent, odourless ink, can however be removed during the first few hours using a damp cloth.

Ink (Oil Based Ink): This ink, used in our ball point pens is a low viscosity ink. Our research has enabled us to make it less viscose. This gives better ball rotation and therefore greater writing ease.

Ink (Ink Pad): This technology is relatively old. It consists of injecting the liquid ink into a fibre pad. The versatility of this system makes it possible to apply it to many writing instruments such as felt tips, markers or even highlighters. Products such as the Fineliner, Spotlitter Twin or even the CD Markers or SCAN-UF/EF use this technology.

Ink (Permanent Ink): This alcohol based ink is guaranteed without Xylene for the great majority of our permanent markers (except the Paint Marker). It has a very quick drying time, does not smell and is highly water resistant. It binds totally to the majority of surfaces, such as paper, card, glass, metal, wood, ceramics, etc. In the case of gold, silver and white markers, these must be shaken before use with the cap on and the pen upright. In order to start applying the ink on the medium, the marker tip must be pressed 3 or 4 times. To retain all the qualities of our gold and silver markers, it is recommended that the caps are replaced firmly and they are stored horizontally.

Ink (Pigment Ink): In old writing technology, pigments were used to create rock paintings. They are composed of a fine powder of plant, metallic or mineral origin, suspended in a solvent (generally water or alcohol). The pigments present in liquid or gel ink colour the medium. This system makes the inks highly water and light resistant and therefore the writing lasts much longer on the paper.

Ink (Ink Regulator / Ink Controller): Enables the ink to move to the tip with great consistency, this complex piece made up of micro ridges allows the momentary storage of surplus ink to avoid any risk of leaks during variations in pressure.

Ink (Secure): Forgery-proof ink: Many of our products are certified for use on official documents. For this purpose, they observe the following standards: ISO 12757-2 (ballpoint pens and refills), ISO 27668-2 (gel ink rollers and refills) & ISO 14145-2 (liquid ink rollers and refills), which guarantees that all tests have been performed in optimum conditions.

Ink (Textile Ink): Water based ink designed for writing on textiles. In order to set the ink on the fabric, you will need to iron it into position for 1 minute. Washing machine resistant. Best used on cotton fabrics.

Ink (Visible Level): On the majority of our products, part of the ink reservoir is visible so that the quantity of available ink can always be monitored and for example, the incredible smoothness of liquid ink can also be assessed.

Ink (Water-based pigmented): This ink allows you to write on any surface. Used in markers as Pilot Pintor, paint is permanent on porous surfaces as fabrics, ceramics, wood, card, paper... On surfaces as glass, metal a special varnish is recommended.

L

Lead (grade): The grade (the degree of hardness) of the leads is defined according to the scale below:

+ soft			Hardness							+ hard		
5B	4B	3B	2B	B	HB	F	H	2H	3H	4H	5H	
+ dark			Colour intensity							+ light		

•H (hard): hard •HB (hard black): medium
•B (black): soft •F (fine point): fine

A hard lead is dry, precise and durable, but produces a rather grey colour. On the contrary, a soft lead is oily with a true blackness, but is used up quickly.

Leads contain clay and graphite. A soft lead contains less clay and a hard one less graphite. Graphite provides the "oiliness" in the lead through its lubricating power, while clay is a lean load. The HB model is the most widely used today because of its neutrality.

Lead (High density Lead): An improved manufacturing formula for increased breakage resistance in comparison to a traditional lead through the use of a polymer.

M

Metal mouth piece: This metal piece located at the mouth of the pen gives increased strength between the tip and the barrel of the product, at the place where pressure is greatest during writing.

Multiple channel irrigation: This special feature of our felt tips gives a constant ink flow, whatever the angle of the tip on the paper.

N

Nib (Chisel Nib): A fountain pen nib cut square makes it possible to string together rounded and slender letters and make the art of calligraphy as simple as possible.

Nib (Double-Blade Nib): Used exclusively on the Parallel Pen, this is made of two parallel steel blades with a square section, between which the ink flows through miniature channels. This technology makes it possible to create rounded and slender letters very simply and much more aesthetically than the majority of calligraphy pens. The different line widths are obtained not only from the width of the blades but also from the angle of the pen. The use of two Parallel Pens makes it possible to create an ink deposit from one fountain pen on the other. The mixable inks then give an incredible colour on the medium.

Nib (Retractable Nib): A resolutely innovative writing concept, the Capless (and Décimo) retractable fountain pen is the only retractable fountain pen in the world. The seal is provided by a minuscule metal shutter which is as discreet as it is reliable. The nib is therefore kept in a sealed environment avoiding the risk of leaks or the ink drying out. This technical solution enables the daily use of a top of the range fountain pen with the ease of a retractable product and the incredible writing comfort which results from the nib.

Nib (Stainless Nib): For increased strength and impeccable quality over time, our fountain pens are manufactured using steel. They form part of Pilot's 90 years of expertise.

Nickel plated brass metal shank support: A nickel collar is integrated around the tip of our finest felt tips. This gives increased strength at the place where pressure is greatest during writing.

P

Point (Hi-Tecpoint / Needlepoint): The Hi-Tecpoint uses a metal tube rather than a cone. This gives greater precision in the stroke and 3 dimples in the fine points (0.5mm maximum) enables smoother writing (see Dimples in the tip).

R

Refill (DIN Refill): This acronym means that the refills used with the product are standardised and work with the majority of fountain pens manufactured throughout the world, across all brands. This applies to cartridges used with our Plumix, Pluminix and Vortex models. Furthermore, our gel ink and liquid ink refills also satisfy the DIN standard.

Refill (Vacuum Refill): This refill equipped with liquid ink makes it possible to discover the sensations of ink regulator products. The ink is stored in a vacuum after its injection into the refill so that it is unaffected by any change in air pressure, especially in planes where it is guaranteed anti-leak. The gel ink also takes advantage of this technology across the entire range.

S

Safety: The majority of the barrels used in our products have been designed for maximum safety. So the caps on our non-retractable writing models satisfy the ISO 11540 standard. They are equipped with a ventilation system allowing breathing in case the cap is ingested. This relates to a micro hole in the cap or even a specific design allowing sufficient air flow.

Shaker System: The shaker system gives an unrivalled ease of use. Shake your Shaker system equipped mechanical pencil and the lead comes out of its own accord thanks to the integration of a feeder into the product barrel. Of course, it is also possible to use the normal push button to get the lead to come out.

T

Tip (Acrylic Fibre Tip): This highly resistant fibre tip gives a soft and smooth contact with the medium. It is used especially in our wide tip markers, thus increasing writing comfort.

Tip (Chisel Tip): Often used in highlighters, the chisel tip makes it possible to work with several line widths using the same, single tip. Relatively practical for producing made to measure lines.

Tip (Conical Tip): The conical variation for supporting the ball in our pens, this is the most widely used version throughout the world.

Tip (Polyacetal Tip): This synthetic material gives increased strength to the tip, notably used on the finest tips because they are very fragile.

Tip (Polyester Fibre Tip): This synthetic fibre tip gives an impeccable smoothness to the tip and perfect ink flow.

TPF System (Twin Pipe Feeder System): The TPF is the system which makes it possible to regulate the ink flow in our liquid ink markers V-Board Master and V-Super Color. Two parallel tubes manage the air pressure entering the marker during its use. This regulator means that liquid ink can be used (see Liquid Ink) with all its resulting qualities.

Tungsten Carbide Ball: Notably used in drill bits, this material offers exceptional strength. It guarantees that the ball keeps its round shape and performance throughout the entire life of the pen.

Twist System: Specially dedicated to Ageless, this Exclusive "Double Twist" mechanism that lets the point come out in two stages. Elegant and practical, it gives to the pen a real alternative concept.

V

V-System: All Pilot's liquid ink products are brought together under the V-System label. Easily recognisable, their name always starts with a V. (e.g.: V-Ball). The GreenTecpoint and Greenball are the only exceptions to this rule. The Pure Liquid Ink logo is also affixed to the product body.

Eco Design: Procedure aimed at considering the environmental impact of a product from its design in order to reduce it. All components are included (use of material, end of life, transport, production...) and can notably impact the design of the product or even its production method.

ECOMARK: Japanese eco label for writing instruments. Created in 1995, it is one of the oldest for our product category. It is the benchmark in the writing world particularly by imposing the use of recycled materials. All the products in the BEGREEN range strictly observe the ECOMARK criteria.

ISO 14001: Standard relating to the environmental management of companies. This involves measuring a company's environmental impact, establishing improvement objectives and measuring their success. This certification, renewable every two years, requires continuous improvement of the company's environmental impact. This standard does not relate to the products, but more particularly the production process.

Möbius Curve (or Möbius Loop / Möbius Strip): Since 1970 this symbol has been used to inform people whether a product is recyclable (single curve) or whether it contains recycled materials (curve + percentage of recycled material). Used throughout the world, it provides every one of us with accurate and easily understandable information about a product's environmental nature.

Recyclable: A product is said to be recyclable if its materials can be reprocessed in the recycling process. In France today, no pens are recyclable. After sorting household waste, only "bottles" (water bottles, milk bottles, drinks bottles, detergent bottles...) are recyclable in terms of plastic materials.

To find out if a product is recyclable, simply look to see if a Möbius Curve (without percentage) is present on the product.

Recycled: Recycled materials are materials which come from other products and have been reprocessed in order to be reused in new products. Using recycled materials makes it possible to avoid the use of raw materials from fossil fuel energy. In our case, it is plastic which is recycled. Since plastic is made up of 99% oil, by using recycled plastic we avoid using this energy because we know that reserves are coming to an end.

To find out the recycled content of a product, simply look at the Möbius Curve and the percentage next to it.

The calculation of the percentage of recycled material in our products obviously excludes refills, the ink, erasers and even leads (in the case of a mechanical pencil).
